

Cassandra Workshop

Turning early warning into shared commitment

Stakeholder alignment for the delivery of complex programmes.

01 · THE INTENT

Named after the prophetic yet unheeded Greek heroine, the Cassandra Workshop is built for leaders whose greatest risk is not the absence of insight but the absence of alignment around it. It converts early warnings into a shared, evidence-based delivery plan that stakeholders own together.

“The signal is rarely the problem. The alignment around it is.”

WHAT IT ADDRESSES · HOW IT WORKS

WHAT IT ADDRESSES

- Stakeholder misalignment on complex programmes
- Resistance to change and low buy-in
- Fragmented ownership of delivery
- Early warnings that go unheeded

HOW IT WORKS

- Structured stakeholder engagement that builds alignment
- Dynamic, evidence-based delivery planning
- Trust built through transparent modelling
- Shared assumptions made explicit and testable

02 · WHAT LEAVES THE ROOM

- ✓ A shared, evidence-based delivery plan
- ✓ A stakeholder alignment map
- ✓ A transparent model of assumptions and risks
- ✓ A durable basis for buy-in and accountability

The workshop is facilitated by ISCM using the same ViewPoint Model and Impact Analyzer methodology that underpins the Foundation's strategic scenario planning, so alignment reached in the room is carried into structured delivery.
